

Supplementary Material for Example of Global vs. Per-Criteria Prompting for DO_2021 Dataset

In this supplementary material, we demonstrate the differences of global vs. per-criteria prompting. As described in our paper, per-criteria prompting is iterating each criteria in a separated prompt instead of directly in a single prompt done in global prompting. Therefore, if a systematic literature review has n selection criteria, per-criteria prompting will split the global prompt into n separated prompts. For example, the SLR DO_2021 contains three selection criteria, so the global prompt handles all three within a single hit as shown in Fig. 1, while our per-criteria prompting decomposes the task into three separate hits as shown in Fig 2.

On a scale from 1 (very low probability) to 5 (very high probability), how would you rate the relevance of the scientific publication for inclusion into a systematic literature review based on the relevant criteria and based on title and abstract?

Title: "{input_title}"

Abstract: "{input_abstract}"

Relevant Criteria:

- Data on humans
- Original PK data or modeled PK data or PK/PD relationships
- Access to the abstract and the full text in English. In the event of doubt regarding eligibility, the records or articles should be included."

Answer:

Fig. 1 Global Prompting Prompt Example for an SLR with Three Selection Criteria (DO_2021)

On a scale from 1 (very low probability) to 5 (very high probability), how would you rate the relevance of the scientific publication for inclusion into a systematic literature review based on the relevant criteria and based on title and abstract?

Title: "{input_title}"

Abstract: "{input_abstract}"

Relevant Criteria:

- Data on humans

Answer:

(a)

Answer:

(b)

On a scale from 1 (very low probability) to 5 (very high probability), how would you rate the relevance of the scientific publication for inclusion into a systematic literature review based on the relevant criteria and based on title and abstract?

Title: "{input_title}"

Abstract: "{input_abstract}"

Relevant Criteria:

- Access to the abstract and the full text in English. In the event of doubt regarding eligibility, the records or articles should be included."

Answer:

(c)

Fig. 2 Per-Criteria Prompting prompt examples for the three selection criteria of DO_2021. (a) Selection Criterion 1 i.e., data on humans; (b) Selection Criterion 2 i.e., original PK data or modeled PK data or PK/PD relationships; (c) Selection Criterion 3 i.e., access to the abstract and the full text in English.
